Automatic Transmission Fluid

Automatic transmission fluid (ATF) is a lubricant that enables smooth power transmission in automobiles that have self-shifting or automatic transmissions. ATF also serves as a coolant and a viscous fluid that transfers power from the engine to the transmission. It also aids the valve operation and helps reduce brake band friction. Normally, it is red in color in order to differentiate it from other engine fluids such as engine oil and antifreeze.

In order for the transmission to run smoothly, it is advised that the transmission fluid be changed every 25,000 to 30,000 miles. Regular maintenance is highly important, as serious problems with your vehicle's transmission could result if the fluid is not changed regularly.

Drop by the Discount Service Center to have your Automatic Transmission Fluid changed!

Oil change, Filter & Lube

\$9.95
(4 cyl. conventional oil)

\$14.95
