## Maintain your Air Conditioning System

Your car's air conditioning system is an incredibly important part of the overall performance of your car. Could you imagine driving on a hot 100 degree day without air conditioning? Ensuring that your vehicle's air conditioning system functions the way it's designed to is important to maintain your comfort while driving.

As your vehicle accumulates more wear and tear, the A/C system may become affected, and may experience problems. Problems with your vehicle's A/C's system may occur for a variety of reasons:

**Refrigerant leaks**—from damaged hoses or poor connections—cause a system shutdown.

**Dirt**—anything other than refrigerant and oil in an air conditioning system is considered dirt. Dirt can ultimately result in the failure of your car's A/C system.

**Restrictions**—dirt, metal shavings, powered desiccant (moisture absorbing material), and foreign matter from the atmosphere. The presence of any of these substances can lead to A/C failure.

**Moisture**—combined with metal and refrigerant, moisture causes the formation of oxides and acids which is highly harmful to your vehicle's A/C system.

Check your car's A/C system regularly; otherwise, it will cost you more money down the road.

To ensure that your A/C system is free of all problems, stop by the Discount Service Center Service Department to have it inspected!

For a limited time, the Discount Service Center is offering an air conditioning service special! We will visually inspect your A/C system for leaks with a fluorescent dye and ultraviolet light PLUS we'll recharge your refrigerant.
